EXERCISE (APACHE SLING - KEY CONCEPTS)

Q. 1) How Sling will Call the Script on the basis of url?
Have a page /content/SlingProject/English/test.html which has resourceType
SlingProject/components/page/basepage?
We have 4 script files at "SlingProject/components/page/basepage":
1. basepage.html.jsp
2. basepage.jsp
3. html.jsp
4. GET.jsp

Soluton : In this case it will always display GET.jsp

/apps/myfirstapp/page
